

FACULTY OF INFORMATION SCIENCE

BACHELOR OF INFORMATION SCIENCE (HONS)

INFORMATION SYSTEM MANAGEMENT (CDIM262)

ADVANCED WEB DESIGN DEVELOPMENT CONTENT MANAGEMENT (IMS566)

GROUP ASSIGNMENT: TALENTRUTE INTERNSHIP TRACKING SYSTEM

PREPARED BY:

STUDENT NAME	STUDENT ID
MIZA NUR RUZANA BINTI MOHD ROMZE	2024437468
NURUL FARHANAH BINTI OMAR	2024200804
NURSYAHIDATUL SYAQIRAH BINTI MALIK HAMDAN	2024220684
FATIN ZULAIKA BINTI ABD WAHAB	2024417684

GROUP: CDIM2624ST2

PREPARED FOR:

DR. MUHAMMAD ASYRAF BIN WAHI ANUAR

SUBMISSION DATE:

17 JULY 2026

ACKNOWLEDGEMENT

In the gracious name of Allah, the Most Merciful and the Most Compassionate, all praise be to Him who has granted us the strength, patience, and clarity of mind to complete this assignment successfully. With His guidance, we have been able to navigate challenges and complete this task with dedication and perseverance.

We would like to express our deepest gratitude to Dr. Muhammad Asyraf Bin Wahi Anuar, our lecturer for Advanced Web Design Development and Content Management (IMS566), for his continuous support, encouragement, and insightful guidance. His commitment to teaching and constructive feedback has been instrumental in helping us improve and complete this project to the best of our ability.

A heartfelt thanks is also due to our fellow group members, Miza Nur Ruzana Binti Mohd Romze, Nurul Farhanah Binti Omar, Nursyahidatul Syaqirah Binti Malik Hamdan, and Fatin Zulaikha Binti Abd Wahab, for their cooperation, teamwork, and commitment throughout this journey. Each member's contributions and ideas were invaluable in making this assignment a success.

We are truly grateful to our beloved families and friends for their unwavering moral support, patience, and continuous encouragement throughout this journey. Their prayers, understanding, and belief in us have been a strong source of motivation and strength.

1.0 INTRODUCTION

Finding and managing internships is often a nightmare. Cluttered back and forth emails, lost resumes, and constant waiting. To solve this, we have developed the Internship Placement Tracking and Application Management System, an easy-to-use online platform that seamlessly connects host organizations, university administrators and students. The whole process is done by the system. The first step is the administrator enrolling the students that are eligible to make sure it is a safe system. Then students can easily move on to browse participating companies, upload their resumes and apply for jobs that suit their objectives. Companies can log in and examine these digital applications securely without having to deal with paper documents, and with one click, they can decide to approve or reject candidates. The best part is the last step. Once the employer approves a student's application, the student can log back in right away and print out the formal letter of internship approval. This solution replaces old-fashioned manual tracking with a transparent, automated process that removes stress and makes the transfer from the classroom to the working world quicker and much more structured for all parties concerned.

3.0 ENTITY RELATIONSHIP DIAGRAM (ERD)

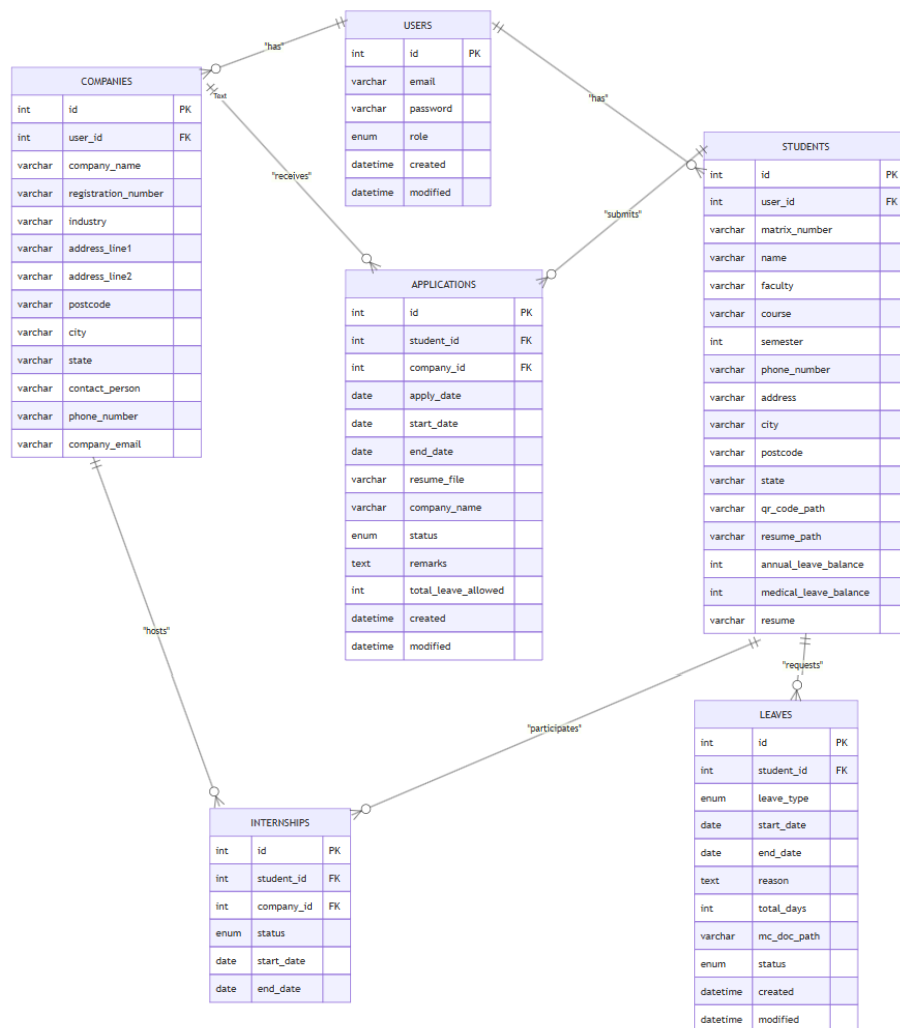

Figure 1: Entity Relationship Diagram of TalentRoute Internship System

4.0 SYSTEM REQUIREMENTS

- **Local Development Environment:** XAMPP. Serves as the integrated platform for the web server and database management.
- **Database:** MySQL (via phpMyAdmin).
- **Fronted:** Includes HTML5, CSS3, JavaScript, and Bootstrap 5.
- **Browser:** Google Chrome.
- **Operating System:** Windows 10 or above.

5.0 INSTALLATION AND SETUP INSTRUCTIONS

Step 1: Install XAMPP

- Download XAMPP from the official website:
<https://www.apachefriends.org/download.html>
- Open the XAMPP Control Panel and start the Apache and MySQL modules.

Step 2: Set Up Project Files.

- Extract and copy the project folder to the local server directory, which is usually located at C:/xampp/htdocs/talentrout.
- Ensure a storage folder named files exists at C:/xampp/htdocs/talentrout/webroot/files.

Step 3: Set Up Database

- Open phpMyAdmin through the web browser.
- Log in to phpMyAdmin using the default root user configuration:
 - Username: 'root'
 - Password: ''
- Create a new local database by clicking "new" and giving it the name talentrout.
- Navigate to the Import tab, select the project.sql file, then click "Go" to import the whole internship tracking database schema and relation data.

Step 4: Configure Database Connection

- Edit the CakePHP framework's initialization configuration file.
- Open your preferred code editor (such as Visual Studio Code).
- Access the local application datasource file config/app_local.php.
- Change the database connection to match the XAMPP credential mappings:

PHP

'username' = 'root'

'password' = ''

'database' = talentrout

Step 5: Launch the Web Application

- Open your web browser and go to <http://localhost/talentroute/>.
- Users can login directly to the system dashboards as Student, Company, or Admin.

6.0 FEATURES AND FUNCTIONALITIES

6.1 Authentication System

The secure login interface supports a total of three (3) distinct user roles:

- **Student:** Create placement profiles, upload resumes, and track active applications.
- **Company:** Manage internship vacancies, review specific incoming applicants, and access resume downloads.
- **Admin:** Oversee the overall application process, auditing the tracking logs, and maintaining the system stability.

6.2 Student Profile and Resume Management (Create)

The integrated submission form allows students to indicate their placement criteria and present their academic portfolio seamlessly.

The input fields consist of:

- Summary of the student's personal and academic profiles.
- Targeted internship criteria or areas of interest.
- Physical resume document selector (PDF format).

Hence, prior to the final database recording, system data sanitization and upload validation engines will ensure that all the important parameters and document are properly assigned to the intended databased folders.

6.3 View and Track Internship Applications (Read, Update, and Delete)

6.3.1 Student

- View the active status of their internship applications.
- Update or renew their uploaded profile information and replace resume inputs.

6.3.2 Company

- View the entire list of student profiles who applied exclusively to their internship listings.

- Update localized applicant statuses (such as Pending, Approved, or Rejected).

6.3.3 Admin

- Access the main log grid to view all the student applications on the website.
- Delete any invalid or duplicate tracking records from the database.

6.4 Application Review and Status Updates

This platform has specific action portals for the companies to evaluate the potential internship candidates.

Application tracking statuses are dynamically updated as:

- Pending
- Approved
- Rejected

Therefore, only candidates with active records and physically validated file routes are cleanly routed to the document rendering engine.

6.5 Application Document Generation and Export (PDF)

This framework will automatically link the application metadata and generates the candidate documentation into a downloadable format.

Generated summaries compile:

- Student / Applicant profile attributes
- Linked application metrics and placement status
- Stored resume binary file stream

Authorized users, whether the student, company, or admin, can download the generated document packages directly from their tracking logs.

6.6 Search and Data Filtering

Users can search through extensive tracking tables based on the essential criteria:

- Student's / Applicant's name
- Target company or listing title
- Application status (Pending, Approved, or Rejected)

6.7 Navigation and Role-Based Access

6.7.1 Student

- Interact with a clean placement board, profile settings, and application tracking elements.
- Access to corporate candidate pools and global administrative logs are restricted.

6.7.2 Company

- Access the application lists and candidate PDF retrieval utilities.
- Isolated from the application lists of competing company accounts.

6.7.3 Admin

- Equipped with an unrestricted management console that includes global auditing tools, table pruning privileges, and system routing controls.

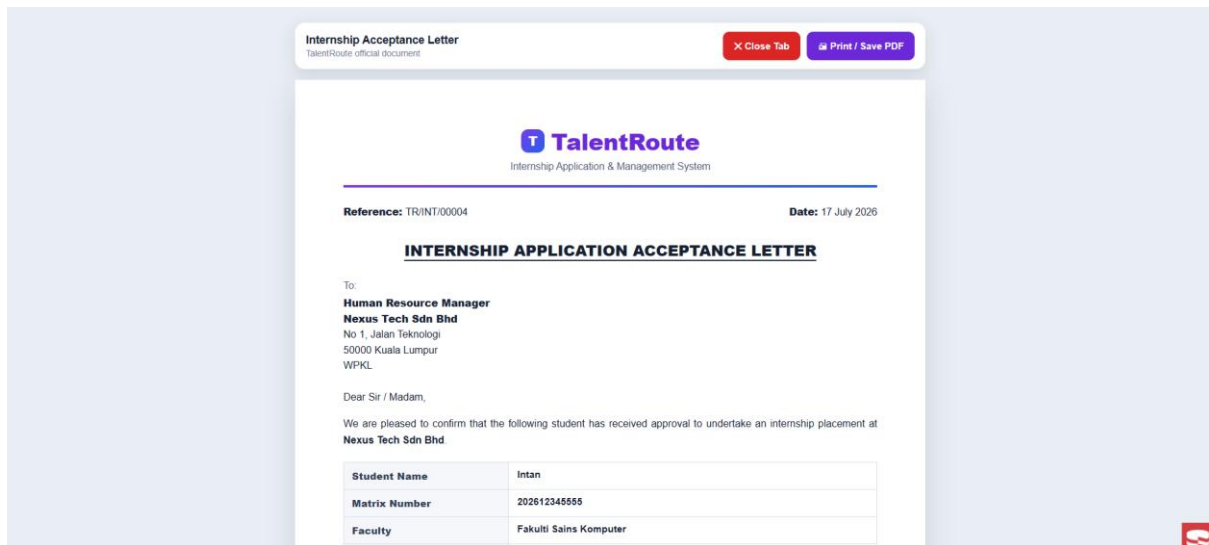

Figure 7: Official Letter

8.0 NAVIGATION GUIDE

1. Public Pages (Before Login)

- Login – Access point for Students, Companies, and Admins.

2. Student Menu

- Dashboard – The main home screen displaying a welcome banner, application statistics (Total, Pending, Approved, Rejected, and Approval Rate), and visual status charts.
- Internships – Page to browse available company placements and apply.
- Applications – View submitted applications, track company decisions, and print the official approval letter.
- Leave – Page to apply for or track official leave requests during the internship period.
- Profile – Review to academic details, resume and official letter.

3. Company Menu

- Dashboard – The main home screen displaying a welcome banner, recruitment statistics (Total Applications, Pending, Approved, Rejected, and Active Interns), and visual status charts.
- Applications – Page to view incoming student applications, review uploaded student resumes, and directly "Approve" or "Reject" candidates.
- Leave – Page to review, manage, and approve leave requests submitted by active interns during their internship period.
- Profile – Manage company details, contact information, and updated company placement details.

4. Admin Menu

- Dashboard – The main home screen displaying a welcome banner, overall system statistics (Total Students, Companies, Applications, Leave Requests, and overall Approval Rate), alongside visual status charts.
- Students – Page to register and manage eligible students in the system, allowing the administrator to add new student accounts and view registered users.

- Companies – Page to register and manage host organizations, allowing the administrator to add new companies to the placement network and view active corporate partners.
- Applications – Page to monitor all submitted student applications, oversee matching statuses, and track company placement decisions.
- Leave – Page to oversee and track all official student leave requests across various companies during their active internship periods.

9.0 WORKFLOWS OF SPECIFIC FORM

This section describes the complete workflow of the Internship Application and Resume Management process, which is the foundation for TalentRoute Internship Tracking System. This workflow describes on how data and file streams flow through the system across multiple user roles, from initial student profile creation, resume upload, to final company validation and PDF download.

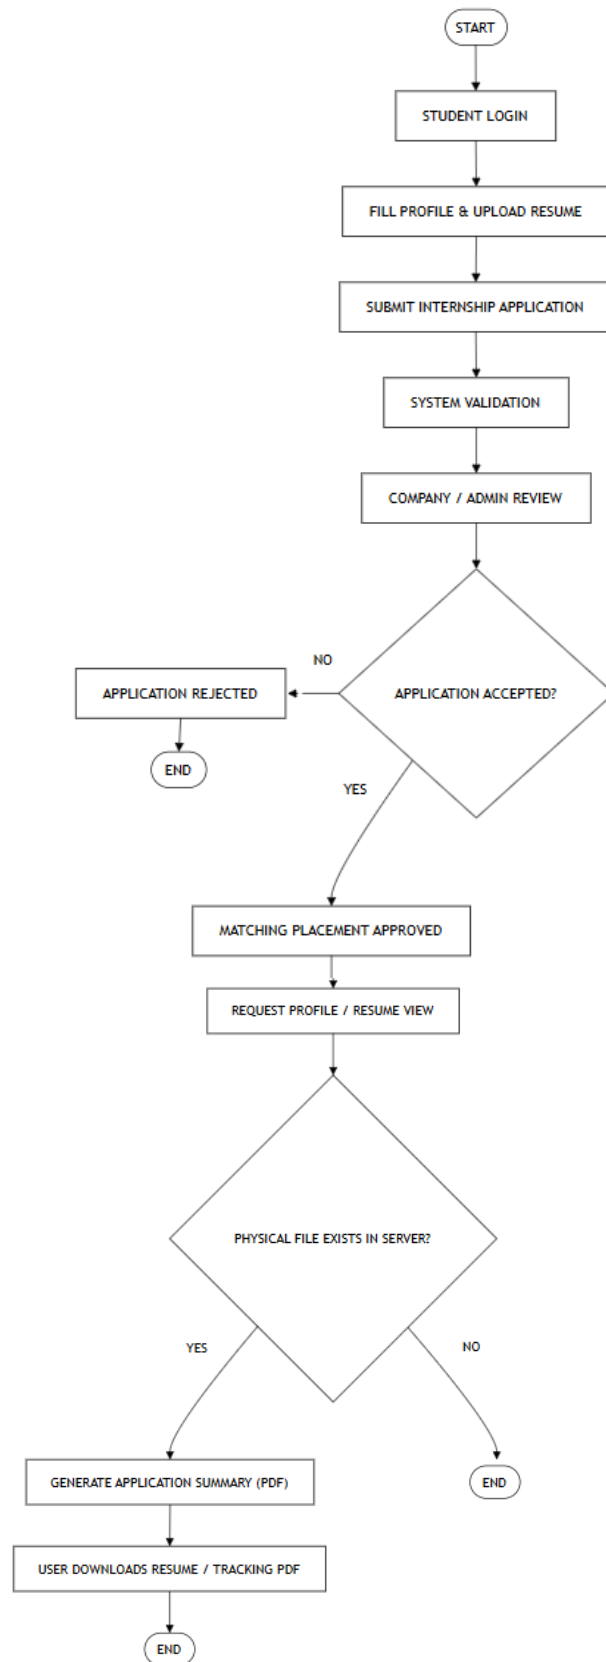

Figure 8: Workflow

System Workflow:

1. Student Login

To access the internship dashboard the student must log into the system using the correct login credentials.

2. Fill Profile and Upload Resume (Create)

The student enters the internship criteria details, qualifications, academic background, and upload their resume file in PDF format. The system will store the textual data in a database and uploads the physical PDF file to the project's webroot directory.

3. Submit Internship Application (Create)

The student browses the site for available placement openings within the platform, and submit their application to the specific company listing, which are linked to the targeted company ID.

4. System Validation

The system validates all required input fields, cleaned up submitted application data, binds the relational data rows, and ensures that the uploaded file path is properly mapped.

5. Company and Admin Review (Read)

The target company representative gets into their localized dashboard to check the list of applicants who applied exclusively to their company. The system administrator can audit the application using a global tracking log.

6. Application Approval (Update)

The company updates the tracking and application status to "approved" or "rejected" based on the qualifications and candidate verification process.

7. Resume / Application Document Generation (Read)

The system determines the validation status and searches for the actual file stream on the server disk. For instance, if the asset path is verified, the template engine processes the system metadata and puts the results into a downloadable PDF tracking summary.

8. Resume / Application Download

A native file download trigger allows the user, whether the student, company, or admin, to download the generated application summary and resume immediately from the dashboard interface.

10.0 TEAM ROLES & CONTRIBUTIONS

NAME	ROLE	CONTRIBUTION
MIZA NUR RUZANA BINTI MOHD ROMZE	PROJECT MANAGER	SYSTEM DESIGN
NURUL FARHANAH BINTI OMAR	BACKEND DEVELOPER	PHP & DATABASE
NURSYAHIDATUL SYAQIRAH BINTI MALIK HAMDAN	REPORT & USER MANUAL	DOCUMENTATION
FATIN ZULAIKA BINTI ABD WAHAB	TESTER	SYSTEM TESTING

12.0 CONCLUSION

TalentRoute development is a response to the problems and inefficiencies surrounding traditional administration of internships. We have developed a centralized, role-based web application that has transformed a typically not organize process (characterized by scattered emails, paper documents, and slow feedback) into a well-organized and transparent digital environment. The integration of the Student, Company and Admin modules is seamless and enables safe registration of the users, instant upload of resumes, direct assessment from the company side and automatic generation of documents for official placement letters. TalentRoute, in the end, is a powerful solution enabling students to close the gap between academic preparation and placement into a professional sector, advancing their careers. It also dramatically cuts administrative costs.

This project has been an invaluable learning experience as part of the course, taking us from abstract ideas to real software development. Technically, building this system gave me a lot of hands-on experience in using XAMPP to build dynamic, database-driven web applications, MySQL to work with relational databases, and Bootstrap to build responsive user interfaces. We learned a lot of role-based access control, dynamic handling of files like validating and storing the uploaded resumes in PDF format, basic database operations. And the event also demonstrated the value of teamwork and collaboration as we all worked together in our own different aspects of project management, backend development, documentation and testing to systematically debug database setups and get the code to integrate faster. TalentRoute is the result of our team's hard work, giving us a better understanding of modern web standards and helpful development techniques that we will use in our future careers in information system management.
